

CYBER LIES

When Finding the Truth Matters

by John Paul Lucich

Cyber Lies is all about empowering readers, who may not be able to afford to hire a computer forensic expert, to gain access to the information they need to find the truth.

DESCRIPTION: *Cyber Lies* was written for the spouse who has a very limited knowledge of computers. It places the power of computer forensics in your hands, which will enable you to access and review data stored on computers or cell phones for which you have legal authority to access. Whether the data is stored on a password-protected computer system or deleted from the hard drive, this book will show you how to access, review and recover the data. It is not the intention of *Cyber Lies* to turn spouses into spies, but rather to educate and empower a growing number of people to find the truth. It is often the things we don't know that can hurt us and our families the most.

ABOUT THE AUTHOR: John Paul Lucich is an internationally-recognized computer forensic expert who has been involved in computer forensics for nearly twenty years. John is a seventeen-year veteran of law enforcement including more than eight years with the N.J. Attorney General's Office, Organized Crime & Racketeering Bureau.

The author has been involved in computer-related cases throughout the United States and has provided expert testimony before the U.S. Congress. John also worked with the U.S. military, helping to identify individuals involved in military computer intrusions, and he also testified as an e-mail expert during the removal of a judge who lied about sending an e-mail message to then-President Bill Clinton.
